E4127S 003111216121

E4127S

Lot: 0031112 Exp: 12/16

Store at -20°C

Description: A suspension of *E. coli* strain ER2508 which has been grown in LB medium and brought to 50% glycerol.

Genotype: F- *ara-14 leuB6 fhuA2* Δ(*argF-lac*) *U169 lacY1 lon::miniTn10(Tet^R) glnV44 galK2 rpsL20(Str^R) xyl-5 mtl-5* Δ(*malB*) *zjc::Tn5(Kan^R)* Δ(*mcrC-mrr*)_{HB101}

This strain is a derivative of RR1 that has been made *lon*⁻. The *lon* mutation knocks out the major ATP-dependent protease in the *E. coli* cytoplasm, thus improving the stability of many foreign proteins when expressed in *E. coli*. The *malE* gene, which encodes Maltose-Binding Protein, is deleted as part of the *malB* deletion.

Notes: Storage at -70°C is recommended for periods longer than 30 days. Avoid repeated freeze/thaw cycles.

This strain replaces PR745. It is *fhuA2*.
