Description: *E. coli* RNA Polymerase, Core Enzyme consists of 5 subunits designated α, α', β, and ω. The enzyme is free of sigma factor and does not recognize any specific bacterial or phage DNA promoters. The enzyme retains the ability to transcribe RNA from nonspecific initiation sequences. Addition of sigma factors will allow the enzyme to initiate RNA synthesis from specific bacterial and phage promoters. The core enzyme has a molecular weight of approximately 400 kDa.

Quality Control Assays

DNA Endonuclease Activity: Incubation of a 50 µl reaction containing 5 units of *E. coli* RNA Polymerase, Core Enzyme with 1 µg of φX174 RF I DNA for 4 hours at 37°C resulted in < 10% conversion to RF II, as determined by agarose gel electrophoresis.

RNase Assay: Incubation of a 10 µl reaction containing 1 unit of *E. coli* RNA Polymerase, Core Enzyme with 40 ng of RNA transcript for 4 hours at 37°C resulted in no detectable degradation, as determined by gel electrophoresis.

DNA Exonuclease Activity: Incubation of a 50 µl reaction containing 5 units of *E. coli* RNA Polymerase, Core Enzyme with 1 µg of a mixture of single and double-stranded *H* *E. coli* DNA for 4 hours at 37°C released < 0.1% of the total radioactivity.
