Histone H3.2 Human, Recombinant

Recombinant with 1 µg of a mixture of single and double-stranded [3H] E. coli DNA (200,000 cpm/µg) for 4 hours at 37°C released < 0.1% of the total radioactivity.

Endonuclease Assay: Incubation of a 50 µl reaction containing 10 µg of Histone H3.2 Human, Recombinant with 1 µg of φX174 RF I (supercoiled) plasmid DNA for 4 hours at 37°C resulted in < 5.0% conversion to RF II form (nicked circle) as determined by agarose gel electrophoresis.

Histone H3.2 Human, Recombinant

RECOMBINANT Store at –20°C Exp: 11/14

Description: Histone H3.2 combines with Histone H4 to form the H3/H4 tetramer. Two H2A/H2B heterodimers interact with an H3/H4 tetramer to form the histone octamer (1,2). It is also modified by various enzymes and can act as a substrate for them. These modifications have been shown to be important in gene regulation.

Histone H3.2, an H3 variant that is found in all eukaryotes except budding yeast, is replication dependent and is associated with gene silencing (3).

Source: An E. coli strain that carries a plasmid encoding the cloned human histone H3.2 gene, HIST2H3A or HIST2H3C. (Genbank accession number: BC130637)

Supplied in: 20 mM Sodium Phosphate (pH 7.0), 300 mM NaCl, 1 mM EDTA and 1 mM DTT.

Note: The protein concentration (1 mg/ml, 66 µM) is measured using the molar extinction coefficient for Histone H3.2 Human, Recombinant were loaded on a 10–20% Tris-Glycine SDS-PAGE gel and stained with Coomassie Blue. The calculated molecular weight is 15256.82 Da. Its apparent molecular weight on 10–20% Tris-Glycine SDS-PAGE gel is ~17 kDa. For a typical example of gel image, please see the product page at www.neb.com.

Quality Control Assays:

SDS-PAGE: 0.5, 1.0, 2.0, 5.0, 10.0 µg of Histone H3.2 Human, Recombinant were loaded on a 10–20% Tris-Glycine SDS-PAGE gel and stained with Coomassie Blue. The calculated molecular weight is 15256.82 Da. Its apparent molecular weight on 10–20% Tris-Glycine SDS-PAGE gel is ~17 kDa. For a typical example of gel image, please see the product page at www.neb.com.

Enzyme Modification: SET7 Methyltransferase: After incubation of a 25 µl reaction for 10 minutes at 37°C, 1 unit of SET7 methyltransferase transfers 20 pmols of methyl group to Histone H3.2 Human, Recombinant.

Protease Assay: After incubation of 10 µg of Histone H3.2 Human, Recombinant with a standard mixture of proteases for 4 hours at 37°C, no proteolytic activity could be detected by SDS-PAGE.

Exonuclease Assay: Incubation of a 50 µl reaction containing 10 µg of Histone H3.2 Human, Recombinant with 1 µg of a mixture of single and double-stranded [3H] E. coli DNA for 4 hours at 37°C released < 0.1% of the total radioactivity.

Endonuclease Assay: Incubation of a 50 µl reaction containing 10 µg of Histone H3.2 Human, Recombinant with 1 µg of φX174 RF I (supercoiled) plasmid DNA for 4 hours at 37°C resulted in < 5.0% conversion to RF II form (nicked circle) as determined by agarose gel electrophoresis.
