# New England Biolabs Certificate of Analysis 

## Product Name:

Catalog Number:
Concentration:
Packaging Lot Number:
Expiration Date:
Storage Temperature:
Specification Version:
Composition (1X):

DNase I Reaction Buffer<br>B0303S<br>$10 \times$ Concentrate<br>10065482<br>08/2022<br>$-20^{\circ} \mathrm{C}$<br>PS-B0303S v1.0<br>10 mM Tris-HCl, 2.5 mM MgCl2, 0.5 mM CaCl2, $\left(\mathrm{pH} 7.6 @ 25^{\circ} \mathrm{C}\right)$

DNase I Reaction Buffer Component List

| NEB Part Number | Component Description | Lot Number | Individual QC Result |
| :--- | :--- | :--- | :---: |
| B0303SVIAL | DNase I Reaction Buffer | 10052590 | Pass |

| Assay Name/Specification | Lot \# 10065482 |
| :---: | :---: |
| RNase Activity (Buffer) <br> A $10 \mu \mathrm{l}$ reaction in 1X DNase I Reaction Buffer containing 40 ng of a 300 base single-stranded RNA is incubated at $37^{\circ} \mathrm{C}$. After incubation for 16 hours, $>90 \%$ of the substrate RNA remains intact as determined by polyacrylamide gel electrophoresis. <br> pH (buffers/solutions) <br> The pH of 10 X DNase I Reaction Buffer is between pH 7.5 and 7.7 at $25^{\circ} \mathrm{C}$. <br> Non-Specific DNase Activity (16 hour, Buffer) <br> A $50 \mu \mathrm{l}$ reaction in 1X DNase I Reaction Buffer containing $1 \mu \mathrm{~g}$ of Haelll digested PhiX174 RF I DNA incubated for 16 hours at $37{ }^{\circ} \mathrm{C}$ results in a DNA pattern free of detectable nuclease degradation as determined by agarose gel electrophoresis. <br> Functional Testing (DNasel Reaction Buffer) <br> A $50 \mu \mathrm{l}$ reaction in 1X DNase I Reaction Buffer containing $1 \mu \mathrm{~g}$ pBR322 DNA and 1:100 units DNasel (RNase Free) incubated for 10 minutes at $37^{\circ} \mathrm{C}$ results in complete digestion of the substrate DNA as determined by agarose gel electrophoresis. <br> Endonuclease Activity (Nicking, Buffer) <br> A $50 \mu \mathrm{l}$ reaction in 1X DNase I Reaction Buffer containing $1 \mu \mathrm{~g}$ of supercoiled PhiX174 DNA incubated for 4 hours at $37^{\circ} \mathrm{C}$ results in $<10 \%$ conversion to the nicked form as determined by agarose gel electrophoresis. | Pass <br> Pass <br> Pass <br>  <br> Pass <br> Pass |

This product has been tested and shown to be in compliance with all specifications.
