# New England Biolabs <br> Certificate of Analysis 

| Product Name: | Diluent A |
| :--- | :--- |
| Catalog \#: | B8001S |
| Concentration: | 1 X Concentrate |
| Lot \#: | 0011703 |
| Assay Date: | $03 / 2017$ |
| Expiration Date: | $03 / 2020$ |
| Storage Temp: | $-20^{\circ} \mathrm{C}$ |
| Composition (1X): | $10 \mathrm{mM} \mathrm{Tris-HCl}, 50 \mathrm{mM} \mathrm{KCl}, 1 \mathrm{mM} \mathrm{DTT}, 0.1 \mathrm{mM} \mathrm{EDTA}, 200 \mathrm{\mu g} / \mathrm{ml} \mathrm{BSA}, 50 \%$ Glycerol, (pH 7.4 @ $\left.25^{\circ} \mathrm{C}\right)$ |
| Specification Version: | PS-B8001S v1.0 |
| Effective Date: | 15 May 2018 |

| Assay Name/Specification (minimum release criteria) | Lot \#0011703 |
| :---: | :---: |
| Endonuclease Activity (Nicking) - A $50 \mu \mathrm{l}$ reaction in CutSmart® Buffer containing $1 \mu \mathrm{~g}$ of supercoiled PhiX174 DNA and a minimum of $10 \mu$ of Diluent A incubated for 4 hours at $37^{\circ} \mathrm{C}$ results in $<10 \%$ conversion to the nicked form as determined by agarose gel electrophoresis. <br> Non-Specific DNase Activity ( $\mathbf{1 6}$ Hour) - A $50 \mu 1$ reaction in CutSmart® Buffer containing $1 \mu \mathrm{~g}$ of PhiX174HaeIII DNA and a minimum of $10 \mu$ l of Diluent A incubated for 16 hours at $37^{\circ} \mathrm{C}$ results in a DNA pattern free of detectable nuclease degradation as determined by agarose gel electrophoresis. <br> $\mathbf{p H}$ (buffers/solutions) - The pH of 1 X Diluent A is between pH 7.3 and 7.5 at $25^{\circ} \mathrm{C}$. <br> qPCR DNA Contamination (E. coli Genomic) - A minimum of $1 \mu 1$ of Diluent A is screened for the presence of $E$. coli genomic DNA using SYBR® Green qPCR with primers specific for the $E$. coli 16 S rRNA locus. Results are quantified using a standard curve generated from purified E. coli genomic DNA. The measured level of E. coli genomic DNA contamination is $\leq 1 E$. coli genome. <br> RNase Activity (Extended Digestion) - A $10 \mu 1$ reaction in NEBuffer 4 containing 40 ng of a 300 base singlestranded RNA and a minimum of $1 \mu \mathrm{l}$ of Diluent A is incubated at $37^{\circ} \mathrm{C}$. After incubation for 16 hours, $>90 \%$ of the substrate RNA remains intact as determined by gel electrophoresis using fluorescent detection. | Pass <br> Pass <br> Pass <br> Pass <br> Pass |
