# New England Biolabs Certificate of Analysis 

Product Name:
Catalog Number:
Concentration:
Packaging Lot Number:
Expiration Date:
Storage Temperature:
Specification Version:
Composition (1X):

BSA-Molecular Biology Grade
B9000S
$20 \mathrm{mg} / \mathrm{ml}$
10065261
10/2021
$-20^{\circ} \mathrm{C}$
PS-B9000S v1.0
20 mM Tris-HCl, 100 mM KCl, 0.1 mM EDTA, 50 \% Glycerol, (pH 8.0 @ $25^{\circ} \mathrm{C}$ )

BSA-Molecular Biology Grade Component List

| NEB Part Number | Component Description | Lot Number | Individual QC Result |
| :--- | :--- | :--- | :---: |
| B9000SVIAL | BSA, Molecular Biology Grade | 10057616 | Pass |

| Assay Name/Specification | Lot \# 10065261 |
| :---: | :---: |
| Endonuclease Activity (Nicking) <br> A $50 \mu$ reaction in NEBuffer 4 containing $1 \mu \mathrm{~g}$ of supercoiled PhiX174 RF I DNA and a minimum of $20 \mu \mathrm{~g}$ of BSA, Molecular Biology Grade incubated for 4 hours at $37^{\circ} \mathrm{C}$ results in <20\% conversion to the nicked form as determined by agarose gel electrophoresis. | Pass |
| Single Stranded DNase Activity (FAM-Labeled Oligo) <br> A $50 \mu$ reaction in NEBuffer 4 containing a 20 nM solution of a fluorescent internal labeled oligonucleotide and a minimum of $100 \mu \mathrm{~g}$ of BSA, Molecular Biology Grade incubated for 16 hours at $37^{\circ} \mathrm{C}$ yields $<5 \%$ degradation as determined by capillary electrophoresis. | Pass |
| Protein Concentration (A280) <br> The concentration of BSA, Molecular Biology Grade is $20 \mathrm{mg} / \mathrm{ml}+/-5 \%$ as determined by UV absorption at 280 nm . Protein concentration is determined by the Pace method using the extinction coefficient of 42,925 and molecular weight of 66,464 daltons for BSA, Molecular Biology Grade (Pace, C.N. et al. (1995) Protein Sci., 4, 2411-2423). | Pass |
| Non-Specific DNase Activity (16 Hour) <br> A $50 \mu \mathrm{I}$ reaction in NEBuffer 4 containing $1 \mu \mathrm{~g}$ of Lambda-HindIII DNA and a minimum of $100 \mu \mathrm{~g}$ of BSA, Molecular Biology Grade incubated for 16 hours at $37^{\circ} \mathrm{C}$ results in a DNA pattern free of detectable nuclease degradation as determined by agarose gel | Pass |

| Assay Name/Specification | Lot \# 10065261 |
| :---: | :---: |
| electrophoresis. |  |
| RNase Activity Assay (2 Hour Digestion) <br> A $10 \mu \mathrm{l}$ reaction in NEBuffer 4 containing 40 ng of fluorescein labeled RNA transcript and a minimum of $20 \mu \mathrm{~g}$ of BSA, Molecular Biology Grade incubated for 2 hours at $37^{\circ} \mathrm{C}$ results in no detectable degradation of the RNA as determined by gel electrophoresis using fluorescent detection. | Pass |
| qPCR DNA Contamination (E. coli Genomic) <br> A minimum of $10 \mu \mathrm{~g}$ of BSA, Molecular Biology Grade is screened for the presence of E. coli genomic DNA using SYBR® Green qPCR with primers specific for the E. coli 16S rRNA locus. Results are quantified using a standard curve generated from purified E . coli genomic DNA. The measured level of E . coli genomic DNA contamination is $\leq 1 \mathrm{E}$. coli genome. | Pass |
| Exonuclease Activity (Radioactivity Release) <br> A $50 \mu \mathrm{l}$ reaction in NEBuffer 4 containing $1 \mu \mathrm{~g}$ of a mixture of single and double-stranded [ $\left.{ }^{3} \mathrm{H}\right]$ E. coli DNA and a minimum of $100 \mu \mathrm{~g}$ of BSA, Molecular Biology Grade incubated for 4 hours at $37^{\circ} \mathrm{C}$ releases $<0.1 \%$ of the total radioactivity. | Pass |
| RNase Activity (Extended Digestion) <br> A $10 \mu \mathrm{l}$ reaction in NEBuffer 4 containing 40 ng of fluorescein labeled RNA transcript and a minimum of $20 \mu \mathrm{~g}$ of BSA, Molecular Biology Grade is incubated at $37^{\circ} \mathrm{C}$. After incubation for 16 hours, $>90 \%$ of the substrate RNA remains intact as determined by gel electrophoresis using fluorescent detection. | Pass |
| Phosphatase activity (FAM Labeled Oligo) <br> A 50 ul reaction in NEBuffer 4 containing a 20 nM solution of a fluorescent internal labeled oligonucleotide with a 5 ' phosphate and a minimum of $100 \mu \mathrm{~g}$ of BSA, Molecular Biology Grade incubated for 16 hours at $37^{\circ} \mathrm{C}$ yields $<5 \%$ degradation as determined by capillary electrophoresis. | Pass |

This product has been tested and shown to be in compliance with all specifications.
