Functional Testing (EnGen[®] Mutation Detection Kit) The EnGen [®] Mutation Detection Kit is functionally tested by PCR amplification of the control template creating a 600 bp amplicon. This is followed by heteroduplex formation and digestion using T7 Endonuclease I, resulting in the expected 200 bp and 400 bp cleavage products, and the 600 bp parental homoduplex.	Pass
* Individual Product Component Note Standard Quality Control Tests are performed for each component included in EnGen [®] Mutation Detection Kit and meet the designated specifications.	Pass
