| Functional Testing (EnGen® Mutation Detection Kit) | Pass |
| The EnGen® Mutation Detection Kit is functionally tested by PCR amplification of the |  |
| control template creating a 600 bp amplicon. This is followed by heteroduplex |  |
| formation and digestion using T7 Endonuclease I, resulting in the expected 200 bp |  |
| and 400 bp cleavage products, and the 600 bp parental homoduplex. |  |
| * Individual Product Component Note |  |
| Standard Quality Control Tests are performed for each component included in EnGen® |  |
| Mutation Detection Kit and meet the designated specifications. | Pass |
