## New England Biolabs Certificate of Analysis

Product Name: NEBNext® rRNA Depletion Kit (Human/Mouse/Rat)

Catalog Number: E6310S
Lot Number: 10011380
Expiration Date: 12/2019
Storage Temperature: -20°C

Specification Version: PS-E6310S/L/X/B v1.0

| * Individual Product Component Note  | Pass           |
| Standard Quality Control Tests are performed for each component included in NEBNext® |                |
| rRNA Depletion Kit (Human/Mouse/Rat) and meet the designated specifications.         |                |
| Functional Testing (rRNA Depletion)  | Pass           |
| The NEBNext rRNA Depletion Kit is functionally validated using commercially          |                |
| available human RNA (e.g. UHRR). After treatment with the kit, a high throughput     |                |
| sequencing library is made and sequenced. Reads from this library are classified as  |                |
| being derived from ribosomal RNA based on sequence homology. This method produces    |                |
| libraries with less than 10% rRNA.   |                |

This product has been tested and shown to be in compliance with all specifications.
