| <b>Functional Testing (Library Construction)</b><br>Each set of reagents is functionally validated and compared to the previous lot<br>through construction of libraries made from genomic DNA and DNA controls (CpG<br>methylated pUC19 and unmethylated Lambda), that are required for assessment of 5mC<br>and 5hmC. The kit's minimum and maximum DNA input requirements are used to make<br>libraries that are sequenced on the same Illumina® flow cell. Library assessment is<br>based on metrics including library yields, GC bias, insert size, and the percent<br>5mC/5hmC detected for CpG, CHG, CHH contexts within the genomic DNA and internal<br>controls. | Pass           |
