Each set of reagents is functionally validated and compared to a previous lot	
through construction of libraries made from commercially available genomic DNA,	
using the kit's minimum and maximum input requirements. Libraries made from previous	
and current lots for both input DNA amounts are sequenced together on the same	
Illumina® flow cell and compared across various metrics including library yield,	
fraction of reads aligning to the reference, GC bias, and insert size.	
* Individual Product Component Note	Pass
Standard Quality Control Tests are performed for each component included in NEBNext®	
Ultra [™] DNA Library Prep Kit for Illumina® and meet the designated specifications.
