Assay Name/Specification | Lot # 10099545

Functional Testing (Poly(A) Isolation)
The NEBNext® Poly(A) Isolation Module is functionally validated using commercially available human RNA (e.g. UHRR). After treatment using the kit's minimum and maximum input requirements, RNA yield is assessed by Bioanalyzer. Libraries made from previous and current lots, using the minimum and maximum input amounts are sequenced together on the same Illumina® flow cell and compared across various metrics including library yield, individual transcript abundance correlations, 5’-3’ transcript coverage, and fraction of reads mapping to a reference. This method produces libraries with less than 10% rRNA.

* Individual Product Component Note
Standard Quality Control Tests are performed for each component included in NEBNext® Poly(A) mRNA Magnetic Isolation Module and meet the designated specifications.

This product has been tested and shown to be in compliance with all specifications.
