<p><b>Functional Testing (Globin and rRNA Depletion)</b></p> <p>The NEBNext<sup>®</sup> Globin &amp; rRNA Depletion Kit (Human/Mouse/Rat) is functionally validated using commercially available human RNA extracted from blood. After treatment with the kit, a high throughput sequencing library is made and sequenced. Reads from this library are classified as being derived from ribosomal RNA based on sequence homology. This method produces libraries with less than 10% rRNA and less than 5% globin RNA.</p>	Pass
<p><b>* Individual Product Component Note</b></p> <p>Standard Quality Control Tests are performed for each component included in NEBNext<sup>®</sup> Globin &amp; rRNA Depletion Kit (Human/Mouse/Rat) and meet the designated specifications.</p>	Pass

This product has been tested and shown to be in compliance with all specifications.
