## New England Biolabs Certificate of Analysis

Amylose Resin High Flow
E8022S
10042731
01/2022
4°C
PS-E8022S/L v1.0

Amylose Resin High Flow Component List				
NEB Part Number	Component Description	Lot Number	Individual QC Result	
E8022SVIAL	Amylose Resin High Flow	10027735	Pass	

Assay Name/Specification	Lot # 10042731
Functional Binding Assay (Resin Binding Capacity)	Pass
Amylose Resin High Flow (1 ml) was packed into a column and equilibrated with	
column buffer. Crude extract from E. coli containing a plasmid that expresses a	
MBP5*-paramyosin $\Delta$ Sal fusion protein ( 8 ml ) was then passed through the column at	
25°C, then washed with column buffer and the target protein eluted with 4 ml of	
column buffer containing 10 mM maltose. Binding capacity was determined to be >4 mg	
MBP5*-paramyosin $\Delta$ Sal /ml of resin based on A280 of the eluate.	
Functional Binding Assay (Resin Binding Specificity)	Pass
Amylose Resin High Flow (1 ml) was packed into a column and equilibrated with	
column buffer. Crude extract from E. coli containing a plasmid that expresses a	
MBP5*-paramyosin $\Delta$ Sal fusion protein ( 8 ml ) was then passed through the column at	
25°C, and then washed with column buffer. The target protein was eluted with 4 ml of	
column buffer containing 10 mM maltose. SDS-PAGE of the eluate on a 10-20%	
Tris-Glycine gel confirms low non-specific binding of extract proteins and high	
isolation of target.	

This product has been tested and shown to be in compliance with all specifications.
