## New England Biolabs Certificate of Analysis

| Product Name:          | NgoMIV                                                                                                                                                           |
|------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Catalog Number:        | R0564L                                                                                                                                                           |
| Concentration:         | 10,000 U/ml                                                                                                                                                      |
| Unit Definition:       | One unit is defined as the amount of enzyme required to digest 1 μg<br>of pXba DNA in rCutSmart Buffer in 1 hour at 37°C in a total<br>reaction volume of 50 μl. |
| Packaging Lot Number:  | 10223063                                                                                                                                                         |
| Expiration Date:       | 12/2025                                                                                                                                                          |
| Storage Temperature:   | -20°C                                                                                                                                                            |
| Storage Conditions:    | 10 mM Tris-HCl, 50 mM NaCl, 1 mM DTT, 0.1 mM EDTA, 50% Glycerol, 200<br>μg/ml rAlbumin (pH 7.4 @ 25°C)                                                           |
| Specification Version: | PS-R0564S/L v3.0                                                                                                                                                 |

| NgoMIV Component List |                       |            |                      |  |
|-----------------------|-----------------------|------------|----------------------|--|
| NEB Part Number       | Component Description | Lot Number | Individual QC Result |  |
| R0564LVIAL            | NgoMIV                | 10220378   | Pass                 |  |
| B6004SVIAL            | rCutSmart™ Buffer     | 10209244   | Pass                 |  |

| Assay Name/Specification                                                                                                                                                                                                                                                                                       | Lot # 10223063 |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------|
| Endonuclease Activity (Nicking)<br>A 50 µl reaction in rCutSmart <sup>™</sup> Buffer containing 1 µg of supercoiled pUC19 DNA and a<br>minimum of 10 units of NgoMIV incubated for 4 hours at 37°C results in <20%<br>conversion to the nicked form as determined by agarose gel electrophoresis.              | Pass           |
| Exonuclease Activity (Radioactivity Release)<br>A 50 µl reaction in rCutSmart <sup>™</sup> Buffer containing 1 µg of a mixture of single and<br>double-stranded [ <sup>3</sup> H] E. coli DNA and a minimum of 100 units of NgoMIV incubated for<br>4 hours at 37°C releases <0.1% of the total radioactivity. | Pass           |
| Functional Testing (15 minute Digest)<br>A 50 µl reaction in rCutSmart™ Buffer containing 1 µg of pXba DNA and 1 µl of NgoMIV<br>incubated for 15 minutes at 37°C results in complete digestion as determined by<br>agarose gel electrophoresis.                                                               | Pass           |
| <b>Ligation and Recutting (Terminal Integrity)</b><br>After a 10-fold over-digestion of pXba DNA with NgoMIV, >95% of the DNA fragments<br>can be ligated with T4 DNA ligase in 16 hours at 16°C. Of these ligated fragments,                                                                                  | Pass           |

| Assay Name/Specification                                                                                                                                                                                                                                                                                                                                                                               | Lot # 10223063 |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------|
| >95% can be recut with NgoMIV.                                                                                                                                                                                                                                                                                                                                                                         |                |
| Non-Specific DNase Activity (16 Hour)<br>A 50 µI reaction in rCutSmart <sup>™</sup> Buffer containing 1 µg of pXba DNA and a minimum of<br>10 units of NgoMIV incubated for 16 hours at 37°C results in a DNA pattern free of<br>detectable nuclease degradation as determined by agarose gel electrophoresis.                                                                                         | Pass           |
| Protein Purity Assay (SDS-PAGE)<br>NgoMIV is ≥ 95% pure as determined by SDS-PAGE analysis using Coomassie Blue<br>detection.                                                                                                                                                                                                                                                                          | Pass           |
| <b>qPCR DNA Contamination (E. coli Genomic)</b><br>A minimum of 10 units of NgoMIV is screened for the presence of E. coli genomic DNA<br>using SYBR® Green qPCR with primers specific for the E. coli 16S rRNA locus. Results<br>are quantified using a standard curve generated from purified E. coli genomic DNA.<br>The measured level of E. coli genomic DNA contamination is ≤ 1 E. coli genome. | Pass           |

This product has been tested and shown to be in compliance with all specifications.
