<b>Binding Capacity (Magnetic Beads)</b> Ni-NTA Magnetic Beads ( 50 µl ) were equilibrated and incubated with 200 µl of crude extract from E. coli containing a plasmid that expresses a His6-LysRS fusion protein for 30 minutes at 25°C, then washed and the His6-LysRS fusion protein eluted. Binding capacity was determined to be >7.5 mg of target protein per mL of bed volume.	<b>Pass</b>
<b>Functional Binding Assay (Qualitative)</b> Ni-NTA Magnetic Beads ( 50 µl ) were equilibrated and incubated with 200 µl of crude extract from E. coli containing a plasmid that expresses a His6-LysRS fusion protein for 30 minutes at 25°C, then washed, eluted and evaluated by SDS-PAGE to confirm low non-specific binding of extract proteins and high isolation of target.	<b>Pass</b>
