New England Biolabs
Product Specification

Product Name: NEBridge® Golden Gate Assembly Kit (BsaI-HFv2)
Catalog #: E1601S/L
Kit Components:
- NEBridge® Golden Gate Enzyme Mix (BsaI-HFv2) (M2616)
- pGGAselect Destination Plasmid (N0309)
- T4 DNA Ligase Reaction Buffer (B0202)

Shelf Life: 24 months
Storage Temp: -20°C
Specification Version: PS-E1601S/L v3.0
Effective Date: 08 Apr 2022

Assay Name/Specification (minimum release criteria)

Functional Testing (Golden Gate Assembly) - A 20 µl reaction containing 1X T4 DNA Ligase Reaction Buffer, 75 ng pGGAselect (Golden Gate destination plasmid, CamR), 75 ng each of 5 plasmids carrying fragments of a gene encoding lacZ, and 1 µl NEBridge® Golden Gate Assembly Kit (BsaI-HFv2) is incubated for 30 cycles of 37°C for 1 minute, 16°C for 1 minute, and then at 60°C for 5 minutes to linearize any remaining plasmid. Successfully assembled fragments result in lacZ gene in the pGGAselect vector and yield blue colonies on an IPTG/Xgal/Chloramphenicol plate. Transformation of T7 Express Competent E. coli (High Efficiency, NEB #C2566) with 2 µl of the assembly reaction yields >250 colonies.

* Individual Product Component Note - Standard Quality Control Tests are performed for each component included in NEBridge® Golden Gate Assembly Kit (BsaI-HFv2) and meet the designated specifications.
