

Inspire curiosity.

Help us reach more young minds!

NEB has always been committed to supporting life science education in the US. We are dedicated to inspiring young scientists and improving the quality of science education for students by providing reagents, educational materials and employee knowledge and time. Our robust course support program provides free reagents to schools, such as yours, to support live experiments in the classroom.

Here are some simple things you can do to help spread the word about how NEB's course support program has helped you, so that others can benefit!

- **Send us photos of your program**

We love seeing young researchers in action, using our products! We post a selection of these photos on the Course Support page on neb.com. Please ensure that all permissions have been received from the students' guardians prior to sharing your photos.

- **Share your experiences on Facebook, Twitter or Instagram** Be sure to include [@NEBiolabs](https://twitter.com/NEBiolabs) – we love to see your photos or videos!

- **Come and visit us!**

We would love for you to give a brief seminar for our employees about the great work you are doing with your kids and how important it is to support STEM education; Perhaps bring a couple of students to share their stories (Please note students must be in high school or older and must provide own transportation).

Thank you for all of the great work that you do!

Best wishes,
New England Biolabs
